Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1–25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26–160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was introduced with the publication of report number 161.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent à classer et à archiver les compilations de données pour lesquelles il y a peu ou point d'analyse. Ces compilations auront d'ordinaire été préparées à l'appui d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports statistiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports statistiques sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 25 de cette série ont été publiés à titre de relevés statistiques, Services des pêches et de la mer. Les numéros 26 à 160 ont été publiés à titre de rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 161.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

Lauzier, R. B. and C.A. McPherson. 1986. Length and weight data for juvenile salmonids sampled during rearing studies in the Nicola/Coldwater river system, during December 1984 and in 1984. Can. Data Rep. Fish. Aquat. Sci. 599: 165 p.

ABSTRACT

Lauzier, R. B. and C. A. McPherson. 1986. Length and weight data for juvenile salmonids sampled during rearing studies in the Nicola/Coldwater river system, during December 1984 and in 1984. Can. Data Rep. Fish. Aquat. Sci. 599: 165 p.

Data are presented on lengths and weights of juvenile chinook and coho salmon and rainbow trout sampled by electrofishing, beach seining, pole seining and minnow-trapping in the Nicola/Coldwater River system from December 1984 to November 1985. Data are also provided on location, date and time of capture.

RESUME

Lauzier, R. B. and C. A. McPherson. 1986. Length and weight data for juvenile salmonids sampled during rearing studies in the Nicola/Coldwater river system, during December 1984 and in 1984. Can. Data Rep. Fish. Aquat. Sci. 599: 165 p.

Les auteurs présentent des données sur la longeur et le poids de saumons quinnat et coho et truite arc-en-ciel juvéniles, échantillonnés de décembre 1984 a novembre 1985 a l'aide de la pêche électrique, sennes de rivage, sennes à bâtons et nasses dans le système de la rivière Nicola/Coldwater. Ils fourissent aussi l'information sur le site, la date et le temps de capture.

INTRODUCTION

A sampling program was undertaken in the Nicola River system starting in late 1984 and continuing throughout 1985 in order to determine the impact of water withdrawal on chinook fry/smolt to adult survival, and to determine the overall carrying capacity of a British Columbia Interior river system for juvenile chinook salmon. This report presents length and weight data for juvenile chinook and coho salmon, rainbow trout and incidental species sampled from December 1984 to November 1985. Data on number of fish captured, fishing effort and habitat data (temperature, depth, velocity, substrate composition, instream cover, overstream cover, population densities) will be presented in a future report.

SAMPLING PROCEDURES

Fish were caught by a variety of methods. Electrofishing was the most extensively used method in the mainstem and tributaries. The multiple-pass method was used with a Smith-Root Model 11A electrofisher (mainly with DC current). In off-channel pools, minnow trapping was used, with salmon roe as bait. In some areas, such as sidechannels and irrigation ditches, a combination of electrofishing and pole-seining was used, with the multiple-pass method in each case. In areas too deep for electrofishing, a 14.7 m beach seine with wings 4.9 m (1 cm stretched mesh), bunt 4.9 m (5 mm stretched mesh) and depth 1.5 m, was used. The net was fitted with 10 m towing lines off the wings. In the Nicola River system, the net was towed by a person walking on the bottom, to a depth of 1 - 1.5 m. In the Thompson River, the net was towed by a 5.6 m aluminum river boat with a 90 hp jet-drive outboard motor. The distance the net was taken offshore depended on local conditions, such as current and bottom topography, and therefore ranged from 5 to 15 m.

Following the multiple-pass sampling, fish were anaesthetized in 2-phenoxyethanol, measured, and when a balance was available, weighed on an Ohaus C-300M Port-O-Gram balance. Fish were allowed to recover in fresh aerated water before release at the sampling site.

SAMPLING LOCATIONS

Sampling was conducted at sites within the Nicola River system and in the Thompson River in the vicinity of the Nicola River (Fig. 1). Detailed descriptions of the sampling stations will be presented in a future report, and general locations and features are shown on Page 158.

DATA

The data in the tables are as follows:

DATE - sampling date (year, month, day)
STN - sampling station number
TIME PST - sampling time (Pacific Standard Time); 9999 indicates no time recorded
FISH CODE - a code identifying each fish sampled, consisting of the letter M (for marked adipose-clipped fish) or U (for unmarked fish) and a 1 to 3 digit number (numbered consecutively at each sample site).
L MM - fork length in millimeters
WT G - wet weight in grams; -99 indicates no weight
SP - species (CH = chinook, CO = coho, RBT = rainbow trout, DV = Dolly Varden char, RSS = red side shiner, SU = sucker, COT = sculpin, D = dace, MWF = mountain whitefish, SQ = squawfish, PMC = peamouth chub)

ACKNOWLEDGEMENTS

Thanks are due to M. Choromanski, J. Elvidge, O. Fleming, P. Higgins, C.D. Levings, S. McIndoe, K. Magel, J. Nathan, T. Suzuki, S. Swales and T. Wong for assistance in the field. This work was financed by the Fisheries Research Branch and a Canada Works grant to C. McPherson.

Sampling Site Descriptions

Site 1. This site was approximately 50 m downstream of the log bridge crossing of the Coldwater River Forest Access Road. This bridge was approximately 2 km upstream of the first Coquihalla Highway crossing (Henning Bridge). The substrate was mainly small gravel with pockets of sand and silt in the shallow pools. There was extensive cover provided by low overhanging trees, log debris and cutbanks.

Site 2. This site was approximately .8 km downstream of the Coquihalla Highway Henning Bridge crossing of the Coldwater River. Access was provided by the old Coldwater Road. The substrate consisted of boulders, cobble, and gravel with riprap banks along the road. There were some cutbanks and overhanging vegetation in the natural bank areas.

Site 3. This site was approximately 4 km downstream of Site 2. There was extensive diversion work due to highway construction at the upper end of this site with riprap banks on both sides. There was older riprap armouring of a pipeline crossing further down the site, followed by natural pools with extensive log debris and cutbank cover. There was one open pool with riprap banks at the upstream end. The substrate was mainly cobble/gravel at the upstream end, and smaller cobble and gravel at the downstream end.

Site 4. This site was approximately 2 km downstream of Site 3 at a bend in the Coldwater River. The landmark for this site was a rock bluff. The banks on one side consisted of riprap, solid rock and cutbanks, and on the other side there was overhanging vegetation and a large cobble/gravel bar. There were deep pools with log debris adjacent to the cutbanks. The substrate was mainly cobble/gravel.

Site 5. (5.0, 5.1, 5.2, 5.3). These sites were in the natural beaver pond areas adjacent to the Coldwater Road approximately 2 km downstream of Juliet Creek. Site 5.0 was the main outlet stream from the beaver ponds to the Coldwater River.Site 5.1 was the upper beaver pond which was inaccessible to rearing fry because of a beaver dam approximately 1.5 m high. Site 5.2 was beaver pond #2, with rearing access for fry. It was the largest of the accessible ponds. Site 5.3 was the small beaver pond adjacent to the Coquihalla Highway. Site 5.3 was filled in during the final construction phase.

Site 6. This site was downstream of the Coquihalla Highway crossing No. 5. It was 0.5 km upstream of the Brodie railway bridge. This site had riprap banks on one side and a large wide cobble bank on the other side. The downstream end had a small side channel with log debris, brush cover and cutbanks.

Site 6P.This site was a compensation area of artificial ponds adjacent to the Coquihalla Highway. It is approximately 1 km upstream of Site 6. They consisted of a series of interconnected rectangular ponds open to the Coldwater River at the upstream and downstream ends.

Site 7. This site is adjacent to the Coldwater Road and was located approximately .8 km downstream of the Brookmere/Coldwater Road junction. This site had riprap banks on the road bank side and an open cobble bank on the opposite side. The substrate was mainly cobble and gravel, with midstream boulder and bank riprap cover.

Site 8. This site was located at the Patchett Road crossing of the Coldwater River immediately downstream of the mouth of Midday Creek. This site had mainly a gravel substrate with extensive sand bars at the down-stream end. One bank was open gravel and sand bars, while the opposite bank was high with a combination of overhanging vegetation cutbank areas and log debris cover.

Site 9. This site was located on the Coldwater (Beaton) Ranch 24 km upstream of Merritt on the east bank of the Coldwater River. This site was an irrigation system servicing the Coldwater Ranch. The system consisted of a long channel with a headgate at the diversion. The inlet was screened. The total length of the irrigation ditch system was 2,667 m. No fish were found at the inlet of the system.

Site 10. This site was immediately downstream of a log bridge crossing the Coldwater River at Kingsvale. The substrate was mainly cobble and gravel, with some midstream boulders in the fast water and pockets of sand in the slow water sidechannel areas. One bank had overhanging vegetation and cutbank cover, the other bank had wide shallow bars with small slow sidechannels.

Site 12. This site included all the sampling areas of the Coldwater Indian Reserve #1. The sampling was concentrated in an area immediately downstream of the log bridge (Collin's Bridge) at the village on Reserve #1. The substrate was mostly small gravel with pockets of silt and sand in the slow water areas along the margin. Cover was mainly overhanging streambank vegetation and tree stumps at the water's edge.

Site 15. This site was adjacent to the Claybanks Municipal campground in Merritt and upstream and downstream of the concrete bridge. One bank was extensively riprapped at the upstream end and the other bank had overhanging bank vegetation. The substrate was mainly cobble/gravel in the fast mid-stream water with small gravel, sand and silt in the slow deep pools at the downstream end. The downstream end had a sand beach on one side, and a high (7-10 m) sand cliff on the other side. Some instream cover was found in log and brush debris around the bridge abutments.

Site 16. This site was the confluence of the Coldwater and Nicola Rivers. All banks were riprapped and the substrate was mainly cobble and gravel. There was minimal cover at this site.

Site 17. This site was approximately 300-400 m downstream of the Coldwater/Nicola confluence. The substrate was mainly gravel. The banks varied from cutbanks to sloughing banks from pasture land to riprap armouring of the CP rail line.

Site 17c This site was located on the Hanna Ranch approximately 0.8 km downstream of Merritt on the north bank of the Nicola River. There were natural springs which supported late summer populations of chinook, coho and rainbow trout. The substrate was silt/mud and there was a high degree of instream cover. There were several deep pools at this sample site, which provided water for irrigation.

Site 18. This site was located approximately 1 km downstream of the Hanna Ranch on the opposite bank. Access was from a dirt road approximately 1 km past the Merritt fairgrounds. The substrate was mainly cobble in the fast water midstream with extensive sand and silt in the back water pools approximately half way down the site. The downstream end of the site had extensive riprap banks protecting the ranch. Access was through a private road down a steep embankment.

Site 18c This site was the cutoff pond adjacent to Site 18. The outlet from this pond was immediately upstream of the riprap bank of Site 19.

Site 19. This site was the mouth of Lindley Creek and the interconnecting irrigation ditch system located on the Neale Brothers ranch approximately 3 km downstream of Site 18. There was extensive overhanging vegetation for cover and cutbanks throughout this site. Substrate varies from pockets of small gravel to sand and silt in the slow water areas.

Site 20. This site was located in Guichon Creek adjacent to the Craigmont Mines property at Lower Nicola. Substrate was mainly cobble and gravel with a sand/silt mixture in the deep pools in the upstream portion of the site. Cover was log debris and large overhanging trees and streambank vegetation in the upper portion, with instream cobble at the downstream end.

Site 21. This site was located in the Nicola River at the mouth of Guichon Creek. The upstream section of the site had low banks with log debris and root wad cover. The substrate close to the margin was mainly sand and silt with pockets of gravel and cobble. In the midstream riffle, the substrate was gravel and cobble. The downstream section of the site, which was downstream of the Guichon Creek mouth, had riprap banks and a silt bottom. This area was a deep (2-3 m) pool with a water intake for the inoperative Craigmont Mine.

Site 22. This site was on the Nicola River at a bend upstream of the Gavelin Road bridge. The upper section of the site was a riffle with low cobble banks and cobble/gravel substrate. The bend area had a pool at the mouth of a drainage ditch with slow water and a sand/silt substrate. There were two large overhanging trees and log debris for cover in this mid-section. This was followed by a fast flowing section with riprap banks and a boulder/cobble substrate. This section varied from 0.5-2.0 m deep.

Site 22c This site consisted of a drainage ditch which flowed into Site 22. The ditch followed the CP Rail track, draining a field and flowing through a culvert pipe, which was accessible to rearing juvenile salmonids during high flows. The substrate was mainly silt and sand, with extensive overhanging vegetation as cover.

Site 24. This site bordered on the Stirling Ranch. The site consisted of a wide variety of habitats, including a mainstem riffle with cobble/gravel substrate, a sidechannel with mainly silt substrate and riprap banks, and a deep pool with rock cliffs and sand and gravel bars. All habitat types were not sampled at one time, at this site.

Site 25. This site was in Spius Creek, at the hatchery effluent outlet. The substrate was cobble/gravel. Cover was provided by cutbanks and overhanging vegetation.

Site 27. This site was immediately downstream of the Spius/Nicola confluence. The upstream area of the site started at the CP railway bridge, where the substrate was boulders, followed by an area immediately downstream of the bridge that had a sandy beach and bottom substrate reaching out to the mid-stream. The downstream section was a riffle area with boulder/cobble/gravel substrate and mid-stream boulder cover.

Site 28. This site was located on the Nicola River in the lower part of the Nooaitch Indian Reserve. A boulder spur was placed at bend in the river to prevent erosion and create a backwater refuge. The mainstem substrate was cobble/gravel with riprap banks. The backwater area had silt substrate with cutbanks, overhanging vegetation and log debris cover.

Site 28P This site consisted of off channel beaver ponds on the opposite bank from the spur site. There was mainly a sand/silt substrate with extensive log debris and overhanging vegetation for cover. There were free-flowing inlet and outlet streams connecting to the mainstem Nicola River.

Site 28C This site consisted of two small intermittent streams, Shackeley Creek and Log Cabin Creek in the vicinity of the spur site, and on the same bank of the Nicola. These two streams had gravel/sand substrate and extensive overhanging vegetation for cover.

Site 29. This site was approximately 5 km downstream of the spur site in the mainstem Nicola River. The upper area of the site was riffle habitat with cobble/gravel substrate and with a low bank with some stream side vegetation. The lower portion ended with a deep fast pool with riprap banks and the outlet of the substrate was sand/silt.

Site 29C This site was a network of small narrow sidechannels adjacent to Site 29. The substrate varied from small gravel to sand and silt. The sidechannels flowed through a stand of saplings, so there was extensive cover provided by overhanging trees, shrubs and grasses.

Site 30. This site was a marsh area adjacent to Hwy 8 approximately 1 km downstream of the spur site (Site 28). The substrate was mainly silt and sand with pockets of small gravel and organic debris. Cover was provided along the banks by overhanging vegetation and there were two beaver lodges which provided cover in a pool area. The inlet of the marsh drained a large marsh on the other side of Hwy 8, which was not accessible to rearing juveniles due to beaver dams. The marsh area was sampled several times for the presence of rearing juveniles.

Site 31. This site was approximately 1 km downstream of the marsh site and it has been identified as an important overwintering site due to a warm water source.This site was a backchannel during low water, with several interconnecting upstream pools which drained into the backchannel area. The substrate was mainly silt with overlying algae, changing to cobble/gravel at the downstream end. Cover was provided by cutbanks, root wads and 3 active beaver lodges. This site became a sidechannel with rising water levels.

Site 32. This site was immediately upstream of the Gordon Creek Ranch and adjacent to the CP Rail tracks. This site was a large deep sidechannel with a beaver dam at the downstream end under the CP Rail bridge. The substrate varied from small gravel to sand and silt. Cover was provided by cutbanks, overhanging vegetation and beaver lodges.

Site 33. This site was immediately upstream of the Manning Creek Forest Access Road Bridge. It was riffle habitat with boulder/cobble/gravel substrate and instream boulder cover.

Site 34. This site was in the mainstem Nicola River adjacent to Site 32. It had a riffle/pool habitat with cobble/gravel substrate in the riffle and small gravel/sand/silt in the pool. The upstream portion has low exposed banks and the downstream area had boulder and riprap banks.

Site 35. This site was 0.4 km from Site 33 and on the opposite bank. The site had fast-moving water through a boulder field. Cover and substrate were mostly boulder with some cobble and small areas of gravel. There were interspersed pockets of sand behind large boulders along the margin.

Site 36. This site was approximately 0.8 km downstream of the 13 Mile Ranch. The locating landmark was a tight 90° turn on Hwy 8 with a level railway crossing. The upstream end of the site was at the highway bend. It had riffle habitat with a mixed substrate of boulder/cobble in the fast water and cobble/gravel/sand/silt in the slow water along the marsh. Over-hanging vegetation provided cover along the margin and boulder cover was in the fast water.

Site 37. This site was located approximately 5 km downstream of Site 36. The locating landmark for this site was a large brown house located on a bench on the north side of the valley. The sample site was located immediately downstream of the house in a straight stretch of the river. The site was in a boulder field area of the river. The substrate was boulder/cobble, as well as the cover.

Site 38. This site was located next to a bend on Hwy 8 approximately 0.6 km downstream of Jefferies' Garden tomato and vegetable farm. The substrate was boulder/cobble/gravel in the fast water with some pockets of sand and silt in the margin pools and behind the largest boulders. The cover was overhanging vegetation and instream boulder.

Site 39A This site was between Site 37 and Site 38. The locating landmark was a two story house with plywood siding located on a rock bluff fronting directly on the Nicola River. The site was a deep pool (4-6 m) with bedrock and cobble substrate.

Site 39. This site was located next to Hwy 8 approx. 0.4 km downstream of Site 39A. The river turns 90° as it entered a fast pool area. There was a large back eddy in this pool. The substrate is bedrock/boulder/cobble. There was some juvenile rearing cover provided by riprap used to protect the highway.

Site 40. This site was located 0.2 km downstream of the lower Rattlesnake Bridge on Highway No. 8. The substrate was boulder/cobble in the fast water and gravel/sand along the margin. There was instream cover with the boulders and overhanging vegetation provided juvenile rearing cover along the margin as the river rises in freshet.

Site 49. This site consisted of a number of irrigation ditches on the Shackan Indian Reserve approximately 39 km downstream of Merritt. All the ditches were on the north bank of the Nicola River and each irrigation system had a different water source. The first system diverted water from the Nicola River into a slow flowing intake channel with a head-gate control structure 800 m downstream of the intake. This system branched off into several small fast flowing channels which terminated in a hayfield. Sampling showed this system supported populations of chinook and rainbow trout.

The second system diverted water from Skuhun Creek into ditch networks on both banks of the creek. This system which only supported rainbow trout juveniles, was no long used for irrigation and the ditches are diverted back into Skuhun Creek.

The third system received water from natural springs at Shackan village. No fish were found in the irrigation system, however chinook, coho and rainbow trout juveniles were found in the outlet to the Nicola River.

Site 49C This site was an irrigation system which diverted water through a trough and trestle system from Shackan Creek on the south bank of the Nicola River at the Shackan Indian Reserve. The system branched into two channels downstream of the trough and trestle, and ended in a hayfield. Sampling showed this system only supported rainbow trout before it dried up in late August or early September.

Site 50. This site was in the Nicola River immediately downstream of Skuhun Creek on the Shackan Indian Reserve. There was a fast flow of water through this site. The substrate was boulder/cobble/gravel. The cover was instream boulder and large overhanging trees, with shrubs close to the margin.

Site 50C This site was in Skuhun Creek on the Shakan Indian Reserve. The site was approximately 100 m upstream of the creek mouth. The substrate was boulder/cobble and the cover was large overhanging trees. This lower end of the creek had a moderately steep gradient.

Site 51C This site was the system of irrigation ditches on the south side of Hwy 8 on the Shulus Indian Reserve. There was extensive overhanging vegetation for cover along the narrow ditches. There was mainly a sand/silt substrate with pockets of small gravel.

Site 98. This site was located next to Hwy 8 and approximately 1 km upstream of the lowest downstream highway bridge. The locating landmark was a pullout on the highway next to the river. The site was located downstream of the pullout in a backchannel that served as an irrigation intake. The substrate was mostly sand/silt with a few pockets of small gravel. The cover was cutbank and overhanging vegetation for the full length of both margins.

Site 99. This site was the location of the 2x3 Inclined Plane Traps which were suspended from the one lane wood bridge crossing the Nicola near its mouth. The fish caught at this site were caught with the Inclined Plane Traps only.

Site 991 This site was immediately downstream of the Inclined Plane Traps site along the river margin downstream of the one lane wood bridge. The substrate was mainly boulder/cobble and sand from the river bank. There was some cover during freshet from streamside vegetation.

Site SC1. This site was in Spius Creek. The site was located at the Prospect Creek Forestry Road bridge. The substrate was cobble/gravel and the cover was cutbank, overhanging vegetation and bridge abutements.

Site TR1. This site was located in the Thompson River upstream of the Nicola confluence . The site was accessed through the CN Martel Siding. The site had two types of habitat, riprap bank and cobble/sand beach. There was a large slow back eddy pool at the site. The substrate was mainly cobble/gravel/sand. Cover was provided along the riprap bank and by instream debris (sagebrush and tumbleweed) which collect along the beach of the pool. This site was also a boat launch area.

Site TR3. This site was located immediately downstream of the Nicola confluence with the Thompson River. The substrate was mainly cobble with some large boulders and a sand/gravel area in a back eddy pool immediately downstream of the confluence. Cover was provided by instream boulders and cobble.

Site TR4. This site was located on the west bank of the Thompson River in a sidechannel downstream of the CN railway "Y" turnaround. The substrate was mainly cobble/gravel. The river bank was cobble/boulder and provided the only cover at this site.

Site TR5. This site was located on the east bank of the Thompson River opposite Site TR4 and slightly downstream. Access to the site was through a public campsite adjacent to Hwy 8. The substrate was boulder with some cobble. The only cover was instream boulder, with the exception of very high freshet flows, when the vegetation at the campsite provided cover.
